

Authoring Suite: _____ Choicemaster

Choicemaster is a multiple-choice authoring program which allows teachers to create exercises with up to 50 items. Each item can have 2, 3, 4 or 5 choices, and each choice can be accompanied by its own feedback message – which is displayed if the learner selects that choice. Each item can have a picture and a sound hint.

Learners can move freely among the items and answer them in any order. They have a choice of *Tutorial mode*, which gives immediate feedback, and *Test mode*, which delays feedback till the end of the exercise. In addition, *Choicemaster* offers *Browse mode*, which allows learners simply to browse around the different choices seeing which are right and which are wrong, and reading any feedback messages.

Some ways of using *Choicemaster* for language learning:

- Cambridge FCE- and CPE-style vocabulary tests.
- Reading and listening comprehension activities (use the no-limit Help screens for transcripts and texts).
- General knowledge quizzes
- Grammar exercises.
- Put learners in groups in front of a very ordinary test (e.g. *Choose the right preposition*), and provide each group with a dictionary, a course book and a student grammar.
