# Words and Phrasal Stress

This is an aid to pronunciation from Sky Software.

## WORD AND PHRASAL STRESS

In this program you must listen and decide which syllable in a word or a phrase is being stressed.

There are two types of activity.

In the first, **LISTEN, CLICK & MOVE**, you will hear words or phrases. You must decide where they are stressed and then move the WORDS into the correct column.

In the second activity, **FIND THE ODD WORD OUT**, you will hear a list of words, one of which is stressed differently from the others. You must click on the odd word. This will present you with a new list of words.

Click on the type of activity you would like to practise.

**Listen, Click and Move**

**Find the Odd Word Out**

In this program learners must recognise where the stress falls in words and short phrases. There is a simple guide to rules of word stress and two practice activities.

In *Listen, Click and Move* learners can choose between words or phrases with 2, 3 or four syllables.

The program draws on a bank of about 400 words and phrases.

Another pronunciation program from Sky Software is *Stress and Rhythm*.

Click on each word in the list on the left and then click on the place you wish to put it. If you are correct, the word will stay in that place and disappear from the list. As you click on each word, you will hear how it sounds.

1st Syllable Stress				
presence				
bedroom				
2nd Syllable Stress				
converge
